

Evolving Our Journey to Innovate Microbial Discovery

When FungiAlert was founded in 2015 our vision was to develop the tools that enabled early detection of soil pathogens to support sustainable agriculture and revolutionise disease management practices. Now, in 2021, following the successful development and commercialisation of our SporSenZ technology as a soil microbial analysis tool for growers, we are pivoting our mission from offering diagnosis tools to developing sustainable microbial treatments.

To support our new mission, FungiAlert will be rebranded as FA Bio to better reflect the next stage of our vision, to discover and develop sustainable farming solutions. In 2021, we fundraised a seed investment round and are now focused on growing the team to deliver our mission, to lead a paradigm shift in the discovery and development of superior bio-products.

We are very excited to embark on this next stage of our journey as we lead the way in discovering and developing superior microbial biofungicides and biofertilisers. Keep up to date on the imminent news of our rebranding here [LinkedIn](#) or [Twitter](#).
